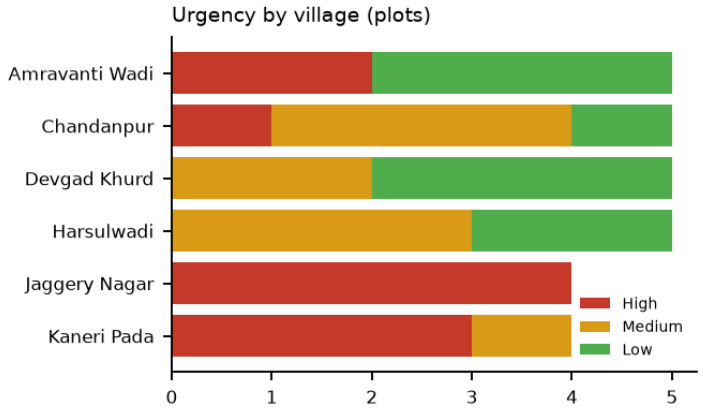
Irrigation Operations Report

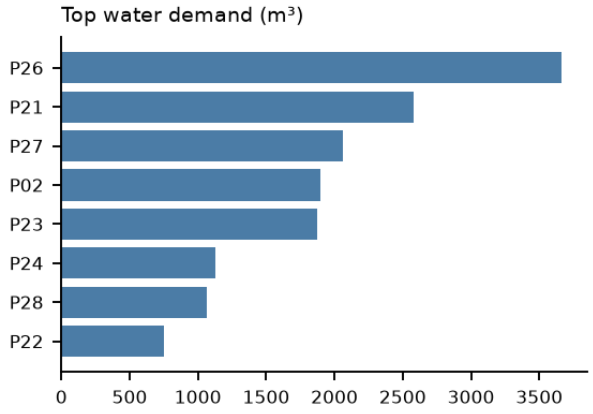
Scenario: **Normal Conditions** | Villages: All | Risk: All | Latest synthetic snapshot

28	13	10	16,807	27/28
PLOTS IN SCOPE	NEED IRRIGATION	HIGH-URGENCY	WATER DEMAND (m³)	SENSORS ONLINE

Farm summary and risk overview

28 plots across 6 villages (56.0 ha) are in scope. **10** are high urgency, **9** medium and **9** low. 13 plots have an irrigation action (including 4 rainfall adjustment and 0 deferred by the water budget); 0 need a sensor review. Estimated demand is **16,807 m³**, of which 16,807 m³ fits the daily budget.





Recommended actions

Action	Plots
Irrigate soon	9
Rainfall adjustment recommended	4
Monitor conditions	15

Plot detail

Plot	Village	Moist. %	Urgency	Recommended action	Water m³	Hours
CS-P21	Jaggery Nagar	7.4	High	Irrigate soon	2,583	20.8
CS-P27	Kaneri Pada	20.3	High	Irrigate soon	2,061	19.1
CS-P02	Amravanti Wadi	15.3	High	Irrigate soon	1,900	16.7
CS-P24	Jaggery Nagar	15.5	High	Irrigate soon	1,125	12.5
CS-P22	Jaggery Nagar	8.7	High	Irrigate soon	750	20.8
CS-P28	Kaneri Pada	7.8	High	Irrigate soon	1,069	19.1
CS-P23	Jaggery Nagar	13.1	High	Irrigate soon	1,875	12.5
CS-P09	Chandanpur	20.0	High	Rainfall adjustment recommended	736	11.2
CS-P26	Kaneri Pada	16.8	High	Irrigate soon	3,664	11.5
CS-P03	Amravanti Wadi	27.3	High	Irrigate soon	679	5.4
CS-P25	Kaneri Pada	32.7	Medium	Monitor conditions	-	-
CS-P10	Chandanpur	36.0	Medium	Rainfall adjustment recommended	261	3.1
CS-P08	Chandanpur	29.8	Medium	Rainfall adjustment recommended	104	1.3
CS-P14	Devgad Khurd	37.8	Medium	Monitor conditions	-	-

Plot	Village	Moist. %	Urgency	Recommended action	Water m³	Hours
CS-P18	Harsulwadi	37.5	Medium	Monitor conditions	-	-
CS-P15	Devgad Khurd	39.7	Medium	Monitor conditions	-	-

CS-P05	Amravanti Wadi	44.0	Low	Monitor conditions	-	-

Data notes and disclaimer

All farms, plots, readings and recommendations in this report are SYNTHETIC and generated for demonstration. The model is trained on synthetic labels and has not been validated on real sugarcane farms. Outputs are decision-support suggestions, not agronomic or engineering advice.

Urgency is a model estimate; the action, quantity and duration come from a separate transparent rule engine (see Methodology). Water depth is capped at 75 mm per event and adjusted for forecast rain and system efficiency.
